

Questions & Answers for GuliKit Smart King Kong and King Kong Pro Controllers

What is Auto Pilot Gaming? How to set it up?

Auto Pilot Gaming is the exclusive technology on GuliKit Smart KingKong and KingKong Pro controllers that allow to record all the gaming operations you want and then auto run these operation by the controller itself with hands free. This is pretty helpful for any time consuming repeated actions like collecting game props,weapons,currency... etc in gaming as well as quick actions. This is much more advanced than normal Macros on other controllers. You may create lots of gaming fun from it.

Press the Set button 3 seconds with a vibration to start,the controller will then record all your operations before the Set button is pressed again to stop or auto stop with a long vibration when time runs up to its limit.

Next the controller starts Auto Pilot gaming once for what it has recorded by clicking the Set button once. Double clicks on the Set button will let it run Auto Pilot gaming for what it has recorded continuously.Any button press except the thumbsticks will stop Auto Pilot gaming.

What is AMS technology? what is the difference from other controllers on motion sense? How to set it up with 4 levels?

AMS is Advanced Motion Sense which is the exclusive technology on GuliKit Smart KingKong Pro controller only. It provides motion sense not only to motion sensing video games, such as the Legend of Zelda, Splatoon 2, Mario Kart 8 Deluxe,but also to those games with no original motion sense,especially FPS games on Windows for fast aiming. Normally PC games on Windows do not have motion sense and you have to use thumbsticks,but now you can enjoy motion sense on these games with Smart KingKong Pro controller,while other controllers do not support this.

Press Set button + L or ZL button to 4 levels Advanced Motion Sense setup. One vibration for low level motion sense,two vibrations for medium level,three vibrations for high level,once long vibration for motion sense cancel.

What is ATM technology? what is the difference from Turbo on other controllers? How to set it up with 2 levels?

ATM is Advanced Turbo Mode which is the exclusive technology for setups on A,B,X,Y,R,ZR buttons for both semi-auto and auto rapid fire.Turbo on other controllers only support semi-auto rapid fire for which you need to hold the button for fire,while Advanced Turbo Mode also support auto rapid fire which doesn't ask to hold the button but fire continuously.

Press Set button +A/B/X/Y/R/ZR button for ATM setup. One vibration for semi-auto rapid fire,two vibrations for auto rapid fire. One long vibrations for Turbo cancel.

What are Analog Triggers? How to set it up with 2 levels?

Analog Trigger are Hall sensing buttons ZR,ZL which offer more realistic game feeling for such as accelerating & braking in racing games or other games which require trigger travel distance for best gaming experience. If you don't need trigger travel distance for such as faster shooting, you may set up for quick trigger level which triggers shooting with a very small pressing.

Press Set button +Right/Left button on D-pad for ZR/ZL setup respectively. One short vibration for quick trigger level,one long vibration for normal analog trigger level.

How to turn on and off the controller?

Click once the mode button to turn on the controller with the mode LED on. Double click the mode button to turn off the controller with mode LED off.

What is auto sleep and quick wake?

The controller will go into sleep mode if no operation in 10 minutes. Pressing on any button of ABXY will make it wake up quickly.

Why does my controller have unnormal response in gaming while I just get it very new?

Some controllers from first batch production probably have small issues in gaming due to the settings made by workers on testing lines.

Pls try to restore its original settings by pressing the Setting button in the middle and "-" button at the same time.

Why I cannot get my controller paired with Switch?

Due to Bluetooth signal interference around, some players may have issue of pairing the controller with Switch wireless. Please follow the steps below to get paired quickly by using the USB A to USB C cable.

1. Place Switch to Switch dock and set Switch to pairing mode.
2. Connect the controller to Switch dock by using the USB A to USB C cable.
3. Switch will get paired with the controller quickly after seconds.
4. Unplug the cable, and Switch is still paired wireless with the controller.

Note: Controller can be also used with the cable plugged as a wired controller.

Do KingKong and KingKong Pro controllers support updating firmware in the future in case Nintendo releases new firmware on Switch that makes it unrecognize the controller?

Yes. All KingKong and KingKong Pro controllers support updating new firmware in the future. New firmware can be downloaded from GuliKit official site in the future when needed.

How to know if the controller battery is recharged full?

The mode LED is yellow on when the controller is under recharging. The LED is off when the controller battery is recharged full.

What does it mean when the mode LED is blinking?

It indicates low battery when the mode LED is blinking and the controller needs recharging.
